

## **Demography – dr Michał Nowakowski, mgr Anna Sadowska**

Course duration: one semester

Number of ECTS credits: 4.0

The course will address five sets of interrelated topics: 1. The history of world population (demographic consequences of neolithic and industrial transition, the first and the second demographic transition theory). 2. Basic demographical methods (rates) and sources of population data. 3. The composition of a population (age-sex structure, marital status). 4. Demographic processes: marriages/divorces, births, deaths, and migration. 5. Population projections.
