Basic information about the subject (independent of the cycle)

Module name	Business Process Automation
Erasmus code	
ISCED code	
Language of instruction	English
Website	
Prerequisites	Basic theoretical knowledge in the field of management
	and computer science (computer and basic software).
ECTS points hour equivalents	Contact hours (work with an academic teacher)
	Total number of hours with an academic teacher 30
	Number of ECTS points with an academic teacher 3
	Non-contact hours (students' own work)
	Total number of non-contact hours
	Number of ECTS points for non-contact hours
	Total number of ECTS points for the module
Educational outcomes verification methods	Practical exercises, project (individual or in a group), case studies, presentation.
Description	The module covers the knowledge in the area of the
	 business processes automation in the organization (enterprise) and tools (software) used for this. Process automation is becoming more and more important for enterprises. Human work is replaced by the work of machines (dedicated devices, e.g. robots) or specialized software. Thanks to this, it is possible to reduce the duration of individual tasks (it is possible to perform more tasks in a shorter time), ensure the required precision and repeatability, minimize the risk of human error, etc. The automation of processes can therefore affect the quality of tasks and indirectly also affect the maintenance and increasing competitive position. The module includes a synthetic introduction to the issue of process automation. During the course, students will learn the possibilities of automating simple office processes by combining the functionality of office software (text editor, spreadsheet, database, program for creating printed materials, etc.). For the automation of selected processes, dedicated software – Robotics Process Automation (RPA) software will also be used. Students will learn how to automate both simple and more advanced processes using specialized and user- friendly software. During the course, the following topics will also be discussed: access to data collected in various sources, downloading selected data from the Internet and functionalities in program add-ons.

	to Robotic Process Automation (RPA). How to Best
	Implement RPA in an Organization, iUniverse, 2018.
	9. <u>https://www.uipath.com/rpa/academy</u>
	10. <u>https://www.blueprism.com/university</u>
Educational outcomes	KNOWLEDGE
	 Increasing knowledge about processes in the organization.
	2. Business Process Reengineering.
	3. The benefits of using RPA software in the
	organization.
	4. Strengths, weaknesses, opportunities and threats
	related to the implementation of RPA software in the
	organization.
	SKILLS
	1. Obtaining additional benefits (possibilities) by
	combining the functionality of office software.
	 Robotic Process Automation (RPA) software functionalities.
	3. Creating tasks (functionalities) that work
	automatically.
	ATTITUDES
	1. Understanding the operation and adaptability of RPA
	software.
	2. Ability to work alone and in a group.
	3. Independent search for solutions and overcoming
	problems.
Practice	 Processes in the organization – a model approach. Completing the functionality of office pottures
	 Combining the functionality of office software. Automation of selected processes using RPA
	✓ Automation of selected processes using RPA software (e.g. creation of a process block system
	with necessary modifications of block settings for the
	purposes of automatic operation).
