**To use the eduroam network, you need a computer/mobile device with a wireless network card that supports one of the following standards: 802.11a, 802.11b, 802.11g or 802.11n and an operating system that supports the 802.1x standard supporting WPA2 authentication and AES encryption.**
To configure access to the eduroam network:
1. Click on the Wi-Fi icon (located in the tray in the lower right corner.

2. Check if the list of available wireless networks includes a network called **eduroam**.
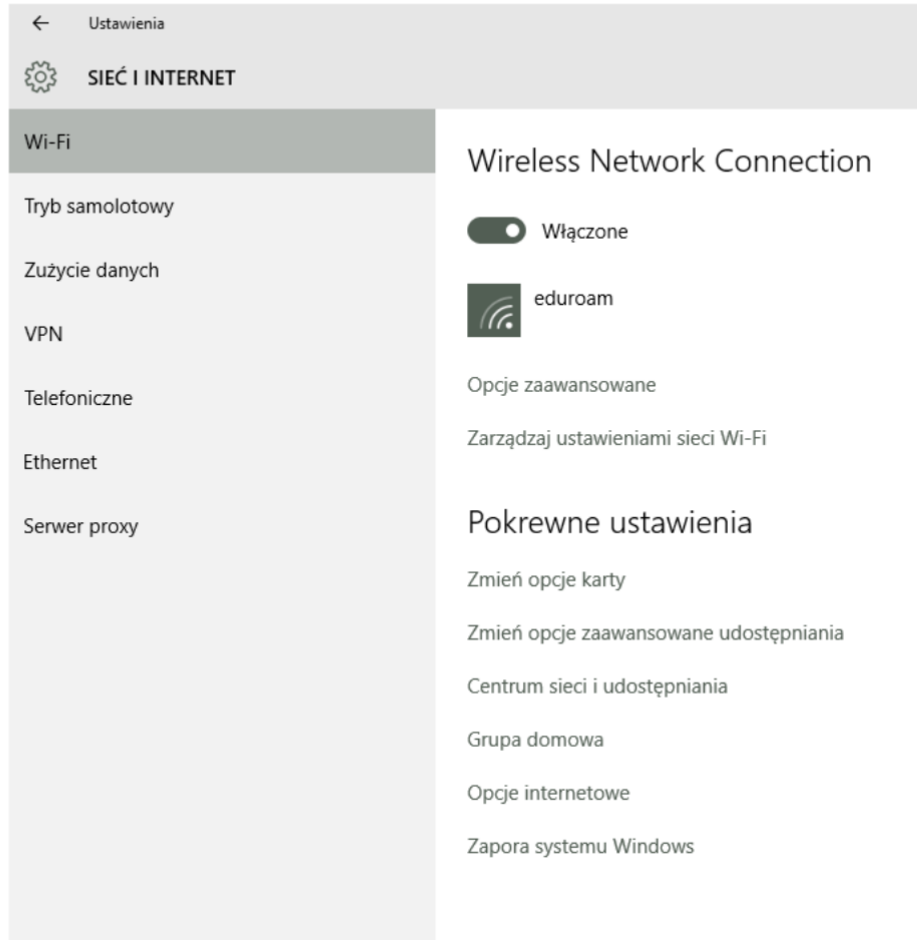

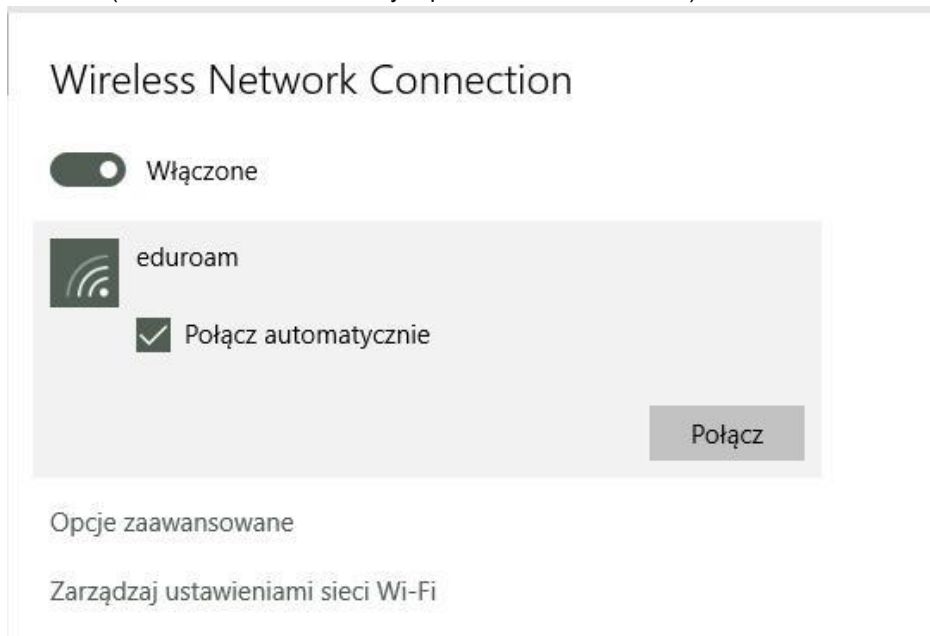

3. Then click on "Network settings".

4. Choose a network called **eduroam**.

5. Then click connect (the "Connect automatically" option should be checked).

![UMCS logo]

6. In the next step, enter the username and password authorising you to use the eduroam network, and then select **OK**.

NOTE!!!

Enter the username and password in accordance with the data from the Eduroam
